This survey was made with an Ainsworth transit No. 3531, with a horizontal limb 5.25 ins. diam., having two double opposite verniers, and full vertical circle 5 ins. diam., having one double vernier; the verniers read to one minute of arc; and with a Keuffel & Esser transit No. 124278, with horizontal limb 5.5 ins. diam., having two double opposite verniers, and full vertical circle 4.5 ins. diam., having one double vernier; the verniers read to one minute of arc. Both instruments were in good condition at the time of the survey and all adjustments were in good order.

All azimuths in this record were determined by the method of angles right referred to the meridian determined by the following observation:

September 24, 1955, at Triangulation Station No. 26, in latitude 39°45' N., and longitude 105°31' W., I made a series of six altitude observations upon the sun for azimuth at approximately equal time intervals, three each with the telescope in direct and reversed positions, observing opposite limbs of the sun, and reading the horizontal angle from a reference point clockwise to the sun.

Mean time of observation, 105th meridian standard time is 8h21m a.m.
Declination of sun at mean time of observation is C°19.2's. Mean observed vertical angle to sun's center is 26°52's.
Mean horizontal angle from reference point to sun's center is 18°00.2'.
True bearing to reference point is N. 71°08' W.

The lines were measured with Keuffel & Esser steel tape 200 feet in length graduated to feet, tenths, and hundredths and a Keuffel & Esser steel tape 300 feet in length graduated every foot and graduated to feet, tenths, and hundredths the initial foot. Both tapes were compared with a standard at the time of beginning the survey and found correct.

All lines and connections of this survey were run by direct methods where the lines are accessible; the inaccessible lines were run by traverse methods, as shown by the calculation sheets aseewith submitted.

The magnetic declination observed at each corner of the survey gave a uniform value of 15°30' E.

---

C. S. M. NO. 1 LODM

At Cor. No. 1 of the C. S. M. No. 1 lode.

Set a galvanized iron pipe, 30 ins. long, 2 ins. diam., 18 ins. in the ground, with brass cap and. CSM.1-20794; from which

The NW cor. of sec. 3, T. 4 S., R. 73 W., 6th Prin. Mer., bears S 60°33' W., 10,612.74 ft. dist.; a granite stone 12 ins. by 6 ins., 6 ins. above ground, firmly set and properly marked.

**LOCATION**

This survey is located in the unsurveyed portion of T. 3 S., R. 73 W., of the sixth principal meridian.

The survey of the C.S.N. Nos. 1, 2, and 3, and 4 lodes is identical with the respective amended locations as marked on the ground. The survey of the C.S.N. No. 4 lode is wholly within the amended location as marked on the ground; Core, No. 2 and witnesses to Core, Nos. 1 and 4 are identical with corners of the locations; Core, No. 3 differs to the extent previously shown.

**EXPENDITURES**

The improvements and the value of the labor and improvements made upon or for the benefit of each of the lode locations embraced in said mining claim by the claimant or his grantees are as follows:

**No. 1**

The discovery cut of the C.S.N. No. 1 lode, the face of which being the underground discovery point, is 451.84 ft. from the center of Line 2-3, and is S. 63°06' W., 983.25 ft. from Cor. No. 1, at point E in the Miami Tunnel, hereafter described; 10 ft. wide, 7 ft. face, 2 ft. southerly to face, centered on discovery point.

Value of cut, $15.

**No. 2**

A drift 7 x 7 ft. in size, which runs S. 53° W., 12 ft., to breast, from point X in the Miami Tunnel, hereafter described.

Value of drift, $480.
